What is σ ?	What is π ?
What is δ ?	What is \times ?
What is \bowtie ?	What is $ ho$?
What are the three layers of DBMS abstraction?	Name three DBMS interface languages $$

To select the age column from the people table without duplicates you would do: SELECT FROM ;	To select all the columns of people who are above 50 you would do: SELECT * FROM WHERE;
To select all the columns of people who are between 20 and 40 you would do: SELECT * FROM WHERE ;	What are the three SQL set operations?
What is the SQL syntax to join 2 tables on a certain column name?	What is the SQL syntax for a natural join on 2 tables?
What is the SQL syntax for renaming tables?	What is the SQL syntax for sorting rows by a column value

To select all the columns of people who are above 50 you would do:

SELECT * FROM people WHERE age > 50;

To select the age column from the people table without duplicates you would do:

SELECT DISTINCT age FROM people;

10

O

 $UNION, \ EXCEPT \ \mathscr{C} \ INTERSECT$

To select all the columns of people who are between 20 and 40 you would do:

SELECT * FROM people WHERE age BETWEEN 20 AND 40;

12

11

SELECT *
FROM table1 NATURAL JOIN table2;

SELECT *
FROM table1 JOIN table2
USING (<column-name>);

14

13

SELECT *
FROM table1
GROUP BY <column-name>;

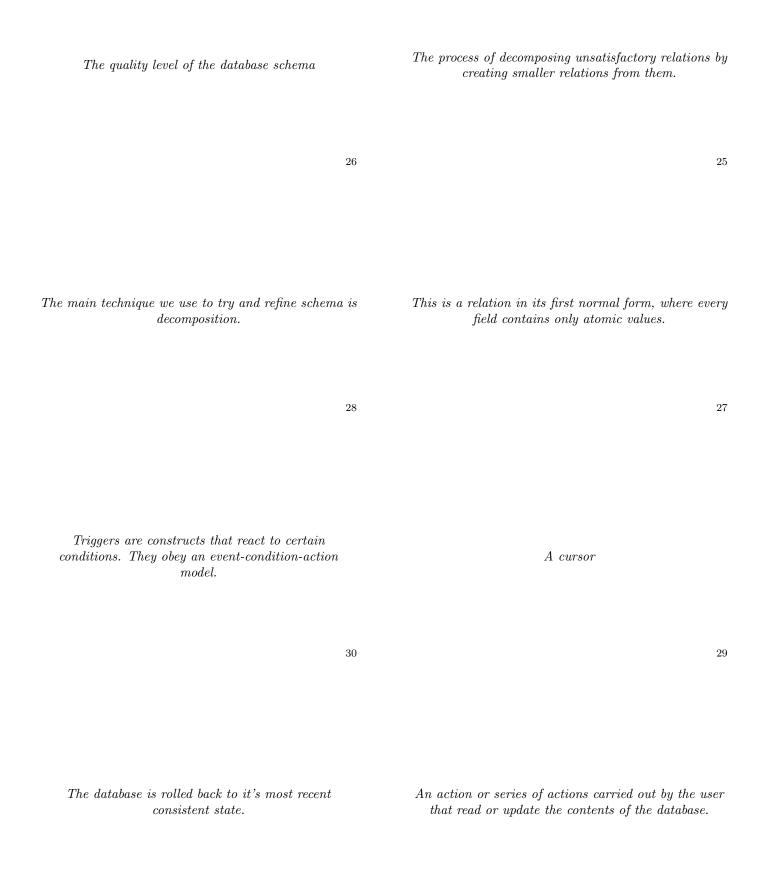

SELECT *
FROM table1 as a, table2 as b
WHERE a.col > b.col;

To select the average salary from the workers table you do: SELECT AVG(salary) FROM workers	To select the number of distinct salaries from the workers table you do: SELECT COUNT(DISTINCT salary) FROM workers
What are the three main constructs in ER modelling?	What type of attribute is the following? Attribute
What type of attribute is the following? Attribute Attribute Attribute	What type of attribute is the following? Attribute
What type of attribute is the following? Attribute	What type of entity is the following? Entity

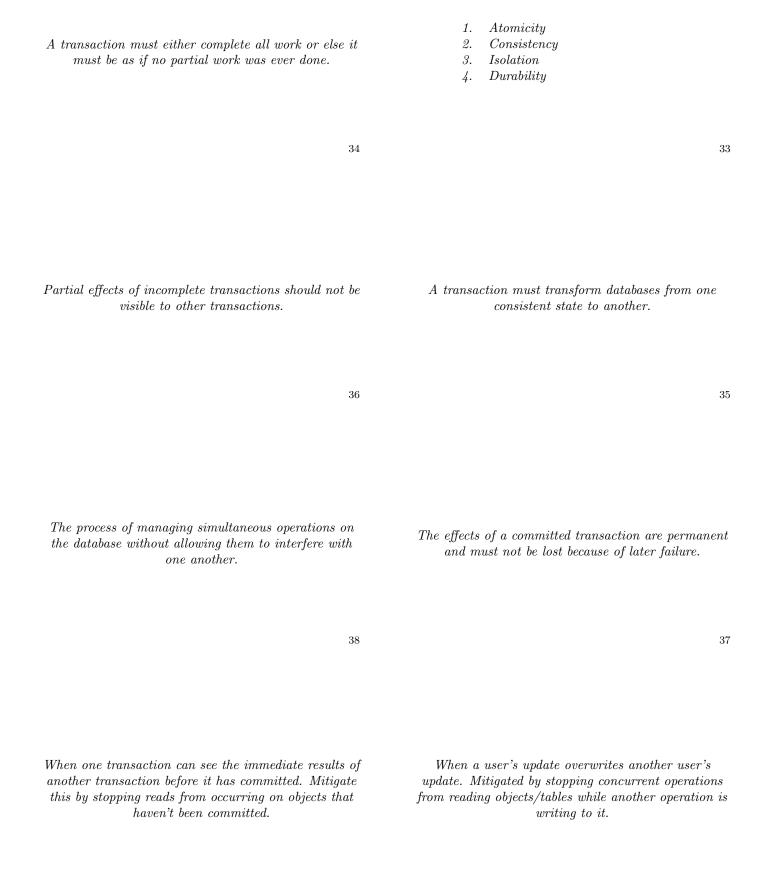

To select the number of distinct salaries fr workers table you do:	om the	To select the average salary from the workers table you do:	e
SELECT COUNT(DISTINCT salary) FROM u	vorkers	SELECT AVG(salary) FROM workers	
	18		17
$Simple\ attribute$		Entity types, attribute types & relationship types.	
	20		19
${\it Multi-valued\ attribute}$		$Composite\ attribute$	
	22		21

Weak entity Derived attribute

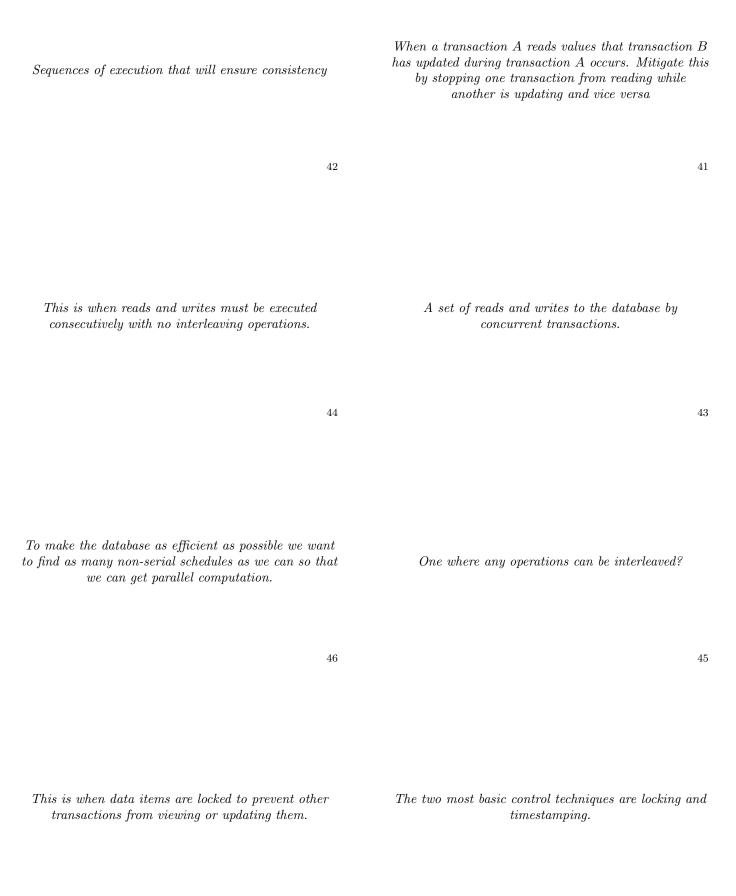

Explain normalization	What does the normal form indicate?
What does 1NF mean?	The main technique we use to try and refine schema is
What allows us to access one row of an SQL command at a time and iterate over the rows?	Triggers are constructs that react to certain conditions. They obey an model.
What is a transaction?	What happens if a transaction fails?

What are a transactions four basic properties?	In terms of transaction, what does atomicity mean?
In terms of transaction, what does consistency mean?	In terms of transaction, what does isolation mean?
In terms of transaction, what does durability mean?	What is concurrency control?
When does a 'lost update problem' occur? How do you solve it?	When does an uncommitted dependency problem occur? How do you solve it?

When does an inconsistent analysis problem occur? How do you solve it? 41	What does serializability guarantee?
What is a schedule?	What is a serial schedule?
What is a non-serial schedule?	To make the database as efficient as possible we want to find as many schedules as we can so that we can get computation.
The two most basic control techniques are and .	What is locking?

Transactions must obtain a lock on a data item when it wants to read.	Transactions must obtain an lock when it wants to write.
Locks are assigned using the $protocol.$	The two phases in the two-phase-locking protocol are the phase and the phase.
What happens in the growing phase of the two-phase-locking protocol?	What happens in the shrinking phase of the two-phase-locking protocol?
How can cascading rollback be prevented?	What should happen if deadlock occurs?
